

Tuan 6.2 Redux in React Native

What is Redux???

Redux is a state management library that stores and manages shared application data in centralized location called the Store.

Redux solves problem such as:

- *prop drilling
- *synchronizing data accross screens
- *managing complex states
- *Maintaining prddictable data flow in large application

=====

When should redux be used????

Redux is suitable when:

- *Multiple screens share the same data
- *Data changes frequently
- *Application contain complex business logic
- *Managing cart, notifucation, and user information

=====

Redux is unnecessary for:

- *simple local state
- *Small form
- *Indepenent components

=====

Redux workflow:

UI -> Dispatch Action -> Reducer -> Store Update -> UI render

=====

Core redux components:

Store contains the entire application state

Characteristics:

- *Single source of truth
- *Centralized storage
- *accessible from any screen
